OBJECTIVE

To work in the field of Information Technology and Automation, applying my knowledge to optimize internal processes, automate repetitive tasks, and transform data into strategic insights. I aim to contribute by supporting decision-making and enhancing the customer experience through technological solutions.

ABOUT ME

Information Systems student with a strong inclination towards process automation and data analysis applied to business. I develop Python solutions for collecting, cleaning and automating manual tasks (such as generating reports and sending documents), as well as interactive dashboards to facilitate the visualization of key indicators. I find it easy to understand business demands and translate them into technological solutions that generate productivity gains. I seek to apply this analytical and technical vision, contributing to the modernization and efficiency of the company's processes.

EDUCATION

2023 - 2026 (In progress)

Centro Universitário
Avantis

Bachelor's Degree in Information Systems

I developed a Python system to automate the generation and distribution of event certificates. The project involved: reading and consolidating participant data from Excel spreadsheets; automated bulk generation of personalized certificates; integration with an email API (SMTP) for automatic delivery; and reducing manual work from hours to minutes.

EXPERIENCE

2022 - 2023

EMPÓRIO BODOSKI

Business Partner / Co-owner

I was part of a multidisciplinary team, fostering professional development and collaboration to align all employees with the business's strategic goals. I applied automation and data organization principles to optimize inventory and order management, reducing operational errors and improving supply chain efficiency.

2023 - atual

HS CONSULTORIA

Information Technology Intern

I focus on data analysis applied to petroleum and biofuel engineering, transforming data into strategic information for decision-making. I develop automation solutions for critical processes—such as the generation of regulatory documents using Python—thereby reducing time and operational errors. I also create technical reports and interactive dashboards, structuring data workflows that enhance efficiency and information reliability within the energy sector.

TECHNICAL SKILLS & COMPETENCIES

- API Integration (REST API)
- ETL & Pipelines
- Python
- Cybersecurity
- Automation
- Data Engineering
- Programming logic & workflow design
- Back-End
- Computer Networks
- Artificial Intelligence
- Data Analysis
- Docker

LANGUAGES

- English – reading and writing – intermediate level
- Japanese – intermediate level
- Spanish – reading and writing – intermediate level

COURSES

2020	Programming & Robotics – Manaós Tech For Kids	Introduction to programming logic, computational thinking, and robotics fundamentals with hands-on activities.
2022	Professional Training – Instituto Técnico de Qualificação	Job-oriented training focused on organization, processes, and the development of technical skills.
