OBJECTIVE

To work as a Data Analyst, Automation Engineer, or Full Stack Developer, applying my skills to optimize processes, automate repetitive tasks, and create solutions that drive operational efficiency and business strategy. I seek a position where I can combine my entrepreneurial mindset with my technical capabilities to consistently deliver value, whether through data analysis projects, automation using Python, or the development of web applications and APIs.

ABOUT ME

Professional training in Information Systems, with solid practical experience at the intersection between technology and business management. My trajectory is marked by an entrepreneurial experience where I developed the ability to identify operational bottlenecks and implement technological solutions with a focus on efficiency and cost reduction. Currently, I work as an IT intern in a consultancy in the oil and biofuels sector, applying data analysis and automation to transform data into strategic information. What sets me apart is the ability to translate business needs into automated flows and interactive dashboards, using Python, SQL, Power BI and web development.

EDUCATION

2023 – 2026 (In progress)	Bachelor's Degree in Information Systems
Centro Universitário Avantis	I developed a Python system to automate the generation and distribution of event certificates. The project involved: reading and consolidating participant data from Excel spreadsheets; automated bulk generation of personalized certificates; integration with an email API (SMTP) for automatic delivery; and reducing manual work from hours to minutes.

EXPERIENCE AND PROJECTS

2022 - 2023	Co-owner
EMPÓRIO BODOSKI	I was part of a multidisciplinary team, fostering professional development and collaboration to align all employees with the business's strategic goals. I applied automation and data organization principles to optimize inventory and order management, reducing operational errors and improving supply chain efficiency.
2023 - present	Information Technology Internship
HS CONSULTORIA	Working with a focus on data analysis applied to petroleum and biofuel engineering, transforming data into strategic information for decision making. I develop automation solutions for critical processes such as generating regulatory documents in Python, reducing operational time and errors. I also prepare technical reports and interactive dashboards, structuring data flows that increase the efficiency and reliability of information in the energy sector.
October 2024	Corporate Website
Belo Conceito	Developed as part of my practical portfolio, this project serves a custom furniture store in Itapema, SC. By applying UX, responsiveness, and accessibility principles, I delivered a solution that strengthens the client's digital presence, combining aesthetics with functionality. This project demonstrates my ability to translate business requirements into a functional web application, covering everything from information architecture to front-end implementation.

TECHNICAL SKILLS AND COMPETENCIES

- | | | | |
|----------------------|-------------------|---------------------|------------------------|
| • Python | • Advanced Excel | • Back-End | • Web Development |
| • SQL | • ETL & Pipelines | • APIs REST | • Generative AI & LLMs |
| • Power BI | • Git & GitHub | • Docker | • Cybersecurity |
| • Process Automation | • Data Analysis | • Computer Networks | |
